

## Alcohol Panel Update

Date: March 15<sup>th</sup>, 2023

---

Effective Date: March 15<sup>th</sup>, 2023

Beginning March 15<sup>th</sup>, a new panel will be available that will include the current Alcohol screen components:

Ethanol, Methanol, Isopropanol and Acetone (ALC screen), along with Ethylene Glycol (EG).

This panel is designed for initial workup of patients. If a positive result is obtained, follow-up testing should include only the relevant testing of either ALC or EG. The test not needed should be deselected from the eRecord ordering screen.

Process Instructions in eRecord include the following:

The following assay requires utilization of limited resources, please consider discussion with toxicology on call regarding the need for this test prior to placing order.”

To complete the order, providers must answer “Yes” or “No” to the statement:

“The necessity of this test has been discussed with toxicology on call”
