

Coagulation Testing: Updated Reference Ranges

Date: October 28, 2020

Effective Date: November 1, 2020

Reference ranges for the special coagulation analytes noted below will be updated. The changes are being implemented as a result of a platform change in the coagulation laboratory. The methodology for all of these analytes remains the same.

Analyte	New reference range
Factor II Activity	76-136% activity
Factor VIII Activity	59-163% activity
Von Willebrand Antigen (FVIII)	56-166% normal
Von Willebrand Activity (FVIII)	55-167% activity
Factor IX Activity	78-164% activity
